FIRST CAR PAIRING

Pairing SEO CANblu app with the immobilizer

SMARTPHONE PAIRING PROCEDURE WITH IMMOBILIZER

You're proceeding to pair your smartphone with immobilizer. If you wish to continue, press YES and confirm your consents.

SMARTPHONE PAIRING PROCEDURE WITH IMMOBILIZER

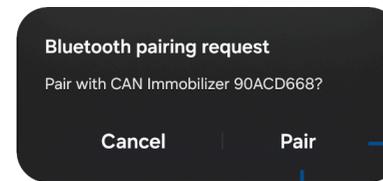

The procedure must be started within 60 seconds of turning the ignition on.

While pairing your smartphone, do not press any other buttons or pedals in the vehicle.

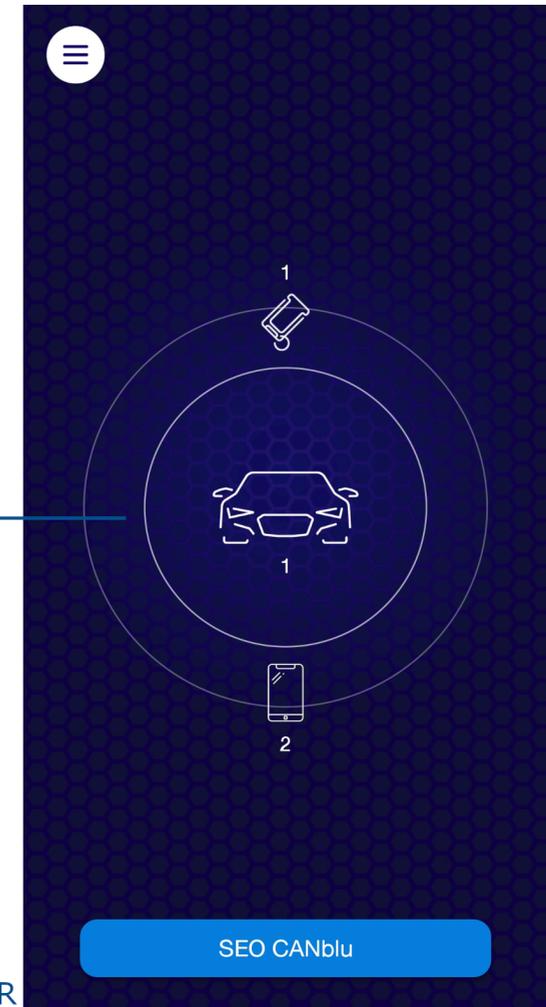

1. Turn on the vehicle ignition and disarm the immobilizer.
2. Wait 10 seconds.*
3. Press the service button 10 times**.

VEHICLE NAME CHANGE

Change the vehicle name in order to identify the car easily

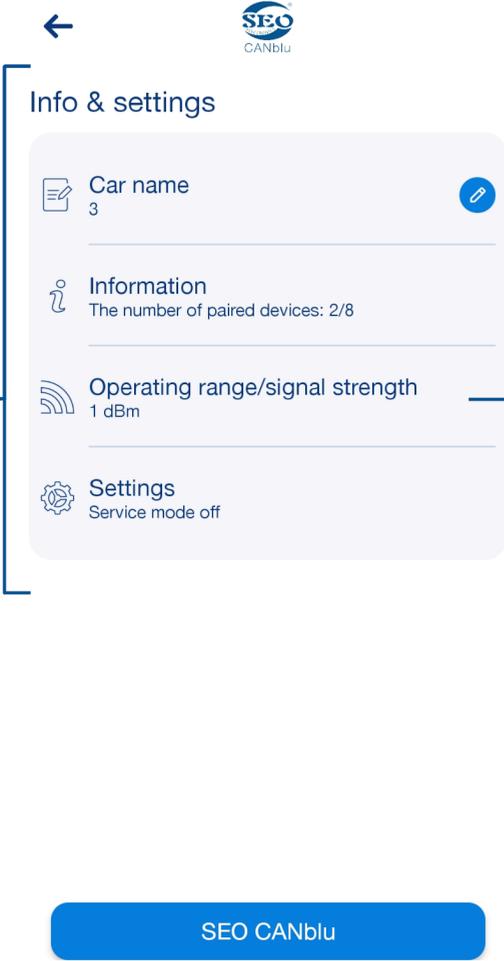

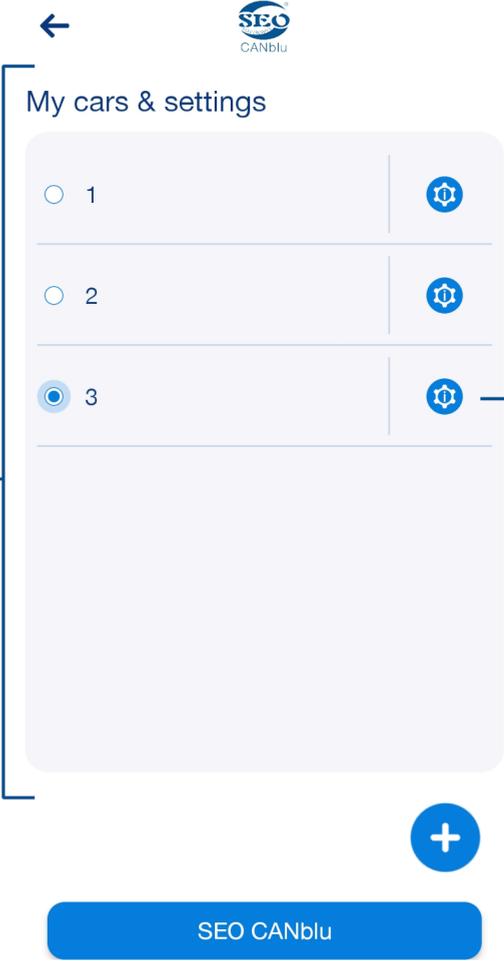

INFORMATION

Information about immobilizer

SIGNAL STRENGTH CALIBRATION

Decrease or increase connection range

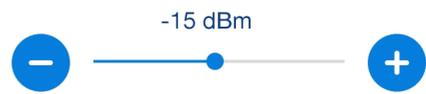

Operating range/signal strength

Adjust your phone's connection range automatically (Calibration button) or manually (+ and - buttons).

When adjusting the range, the phone should be in the place where you will most often hold it when entering the car (e.g. placed by your leg or in your hand).

The automatic calibration process may take 60 seconds.

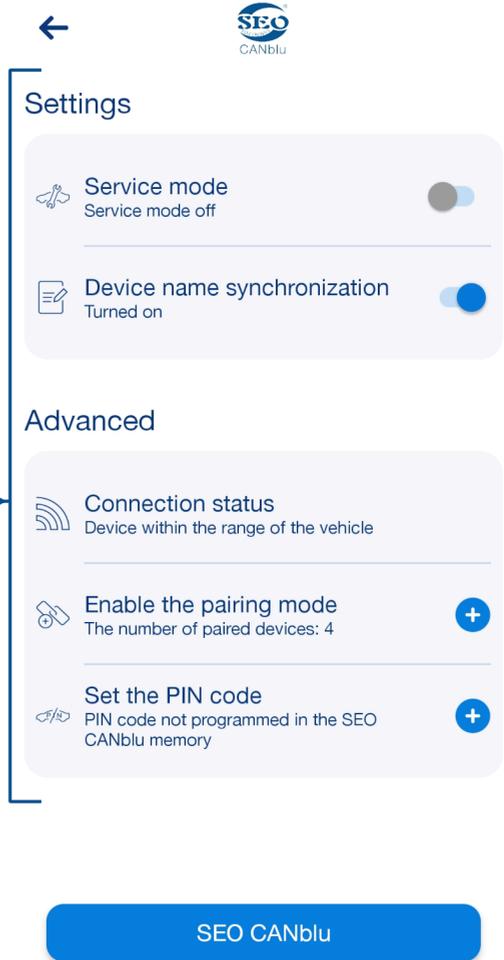

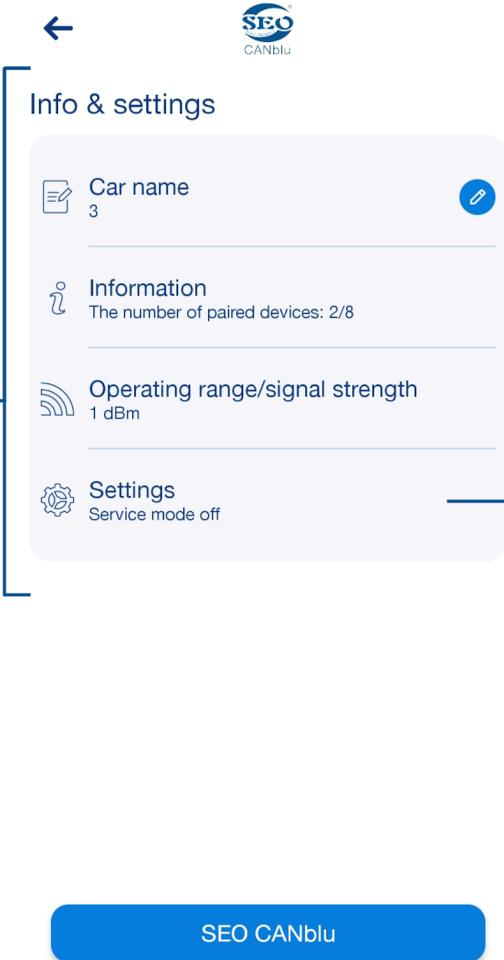

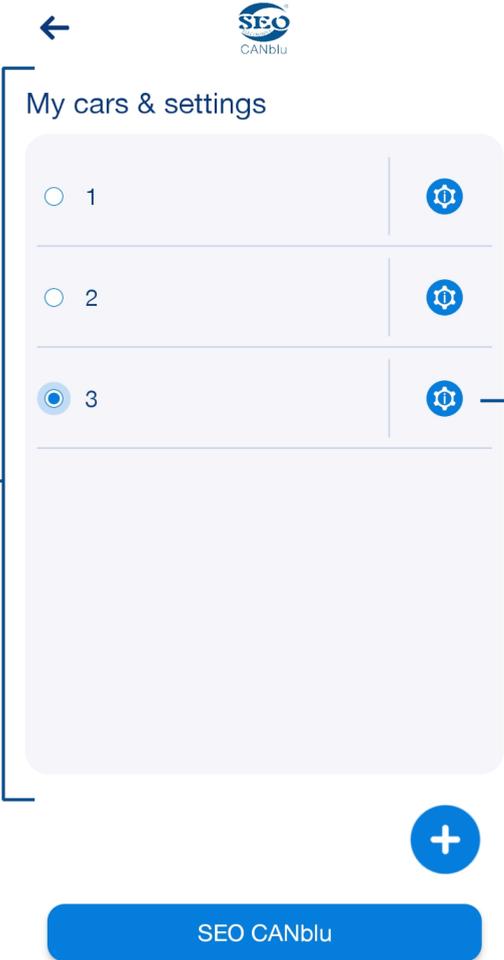

If your phone connects to the immobilizer later than expected, increase the range by pressing the + button.

CALIBRATION CANCEL OK

VEHICLE SETTINGS

Immobilizer settings change

Wireless module software update

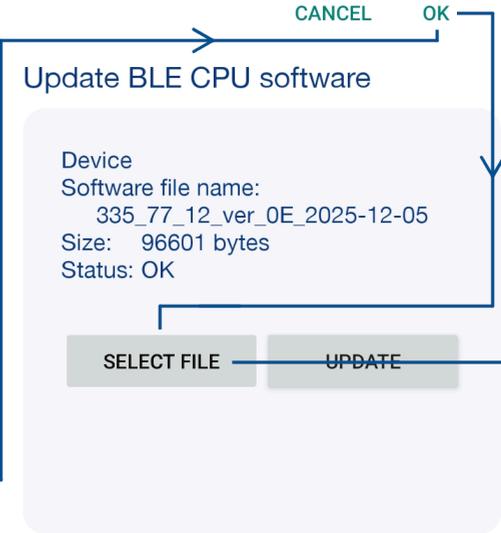

Update wireless module software of chosen vehicle

New update for BLE CPU immobilizer system is available.

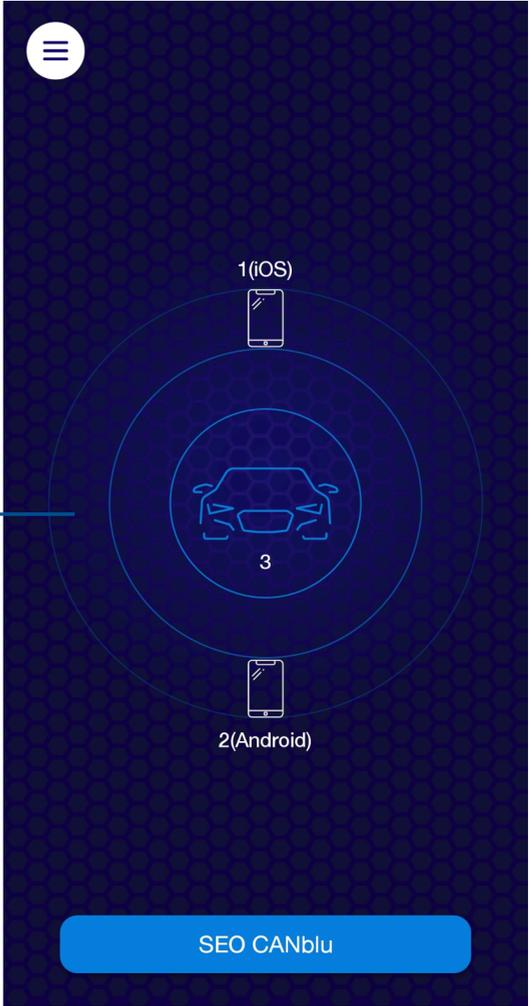

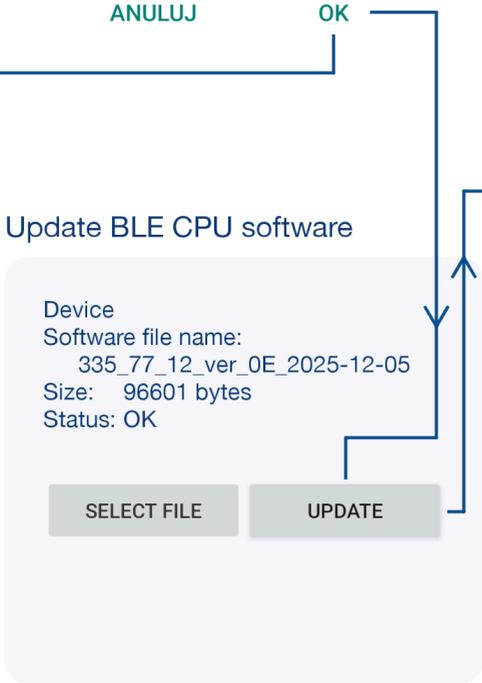

Would you like to update your immobilizer software?

- If so, remember to follow the instructions below:
- Smartphone must be within the range of the immobilizer - preferably inside the vehicle
 - Smartphone must have access to the Internet (Wi-Fi/cellular data)
 - After proceeding, the update window will appear - after clicking UPDATE, wait for the update to finish

DIAGNOSTIC REPORT

If you're struggling with application, please send us diagnostic report

Follow the steps below immediately after a problem with the application or immobilizer connection occurs:

1. Make sure your phone is within range of the immobilizer
2. Please provide a title (short description) and describe the problem in the next window. Make sure you describe problem in the most precise way (and steps required to reproduce the problem) so we can reproduce it in our lab.
3. Submit the message by pressing OK.
4. The message with diagnostic data will be sent to the developer of the app once you enable data transmission.

Please confirm sending the message with diagnostic data.
